

Revisiting imatinib for pulmonary hypertension: lessons from proteomics and a clinical trial

Guest Lecture

by

Dr. Athénaïs Boucly

Université Paris-Saclay, Faculté de
Médecine, Le Kremlin-Bicêtre, France;
National Heart and Lung Institute,
Imperial College London, London

Dr. Athénaïs **Boucly** is a pulmonologist and PhD graduate. She focuses on the identification of novel biomarkers associated of the pronosis of PAH.

and

Prof. Martin Wilkins

National Heart and Lung Institute,
Imperial College London, London

Martin R. **Wilkins** is Professor of Clinical Pharmacology. His current work uses genetics, proteomics and metabolomics to define disease pathways in patients with PAH with the aim of identifying novel druggable targets and personalised medicines.

Date: January 9th 2024, 4PM

Location: seminar room Pathology 01 (MC1.F.05.016), 5th floor, Med Campus MC1.F, Neue Stiftingtalstraße 6
