

The Institute for Medical Informatics, Statistics and Documentation
announces a lecture held by Dr. Hans Ulrich Burger

Date: 9. April 2025
Location: MC2.Q.01.27 - SR65

15:00-16:00

External control: When and when not

With the increasing availability of quality real world data sources, external control analyses are becoming more and more popular. This presentation provides a short introduction into external control analyses and then focuses the discussion on two important areas for external control analyses:

- the different sources of potential bias and
- areas of meaningful applications.

The use of external controls will finally be discussed also in some examples.

We look forward seeing you!

Univ.-Prof. DI Dr. Andrea Berghold
